

WE
INSPIRE
IN TRUST

ADD A STRONG LAYER OF
SECURITY TO YOUR BUSINESS
WITH THE IMPLEMENTATION OF
ISO/IEC 27701:2019

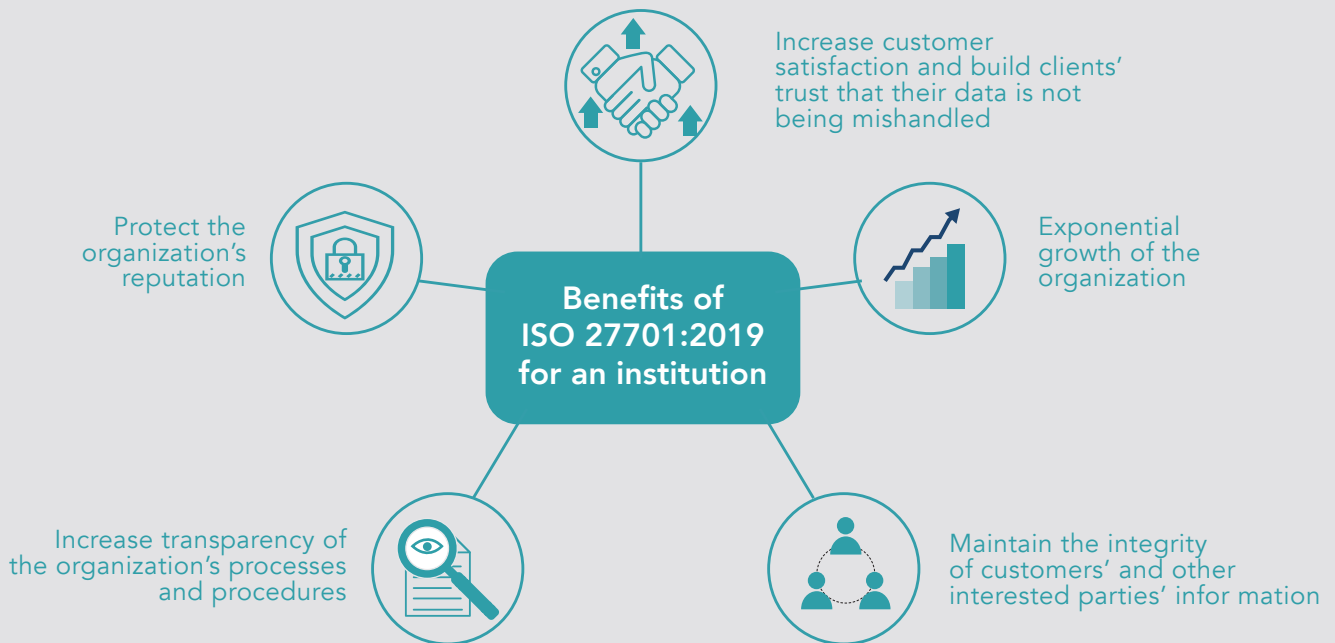

The exponential growth of personal information collected and the increase of data processing has led to privacy concerns. By implementing a Privacy Information Management System (PIMS) in compliance with the requirements and guidance of the ISO/IEC 27701:2019, organizations will assess, treat, and reduce risks associated with the collection, maintenance, and processing of personal information.

The guidelines and requirements of ISO/IEC 27701:2019 are an extension of ISO/IEC 27001 and protect PII (Personal Identifiable Information) that is processed and collected by any organization.

These additional requirements and guidelines offer industry-leading methods and frameworks to secure PII by using Encryption, Anonymization, and many other security measures and policies.

Scope

The standard of ISO/IEC 27701:2019 is applicable to organizations of all types and sizes, including public and private companies, government entities, and non-profit organizations, which are responsible and accountable for Personally Identifiable Information (PII) within an Information Security Management System (ISMS).
