

INTERNATIONAL STANDARD FOR PROTECTING PERSONAL INFORMATION IN CLOUD STORAGE **ISO/IEC 27018:2019**

Protecting information in cloud storage is a function from ISO 27018. The standard will give further helpful implementation guidance for the controls published in ISO/IEC 27001. Furthermore, it sets out extra guidance on PII protection requirements for the public clouds. All data breaches involve PII, so securing PII covers a range of measures.

CLOUD SERVICES PROVIDERS MUST HANDLE PII IN A SPECIFIC WAY WHEN:

- Transmitting over public networks
- Storing on mobile devices
- Recovering data
- Restoring data
